Mark Angelo Taladro Plocios

Full-Stack Web Developer

mar.plocios@gmail.com | 09152914854 | Mamatid, Cabuyao, Laguna

PROFILE SUMMARY

Full-Stack Developer with years of experience building and maintaining high-traffic web and mobile applications. Specialized in scalable backend systems, real-time APIs, and transaction-heavy platforms using Node.js and TypeScript. Proven track record in system architecture, payment integration, cloud deployment, and cross-functional team collaboration.

PROFESSIONAL EXPERIENCE

Sr. Full Stack Developer **Nov 2024 – Present**

iAMTechSolutions

- Build responsive, dynamic UIs using React.js and Material UI serving thousands of daily users
- Architect and develop scalable backend services with Node.js, Fastify, and Express.js handling high-concurrency workloads
- Implement real-time client-server communication via WebSocket APIs for live data features
- Integrate third-party services including payment gateways and eKYC identity verification systems
- Design and optimize MySQL and PostgreSQL schemas, improving query performance and system reliability
- Collaborate with executives on technical strategy, system architecture, and long-term product roadmaps

Software Developer **Aug 2022 – Nov 2024**

Leekie Enterprises Inc.

- Built and maintained backend systems for real-time interactive platforms handling player data, scoring, and leaderboards
- Developed game logic APIs managing gameplay state, rewards, and real-time updates across concurrent sessions
- Created 2D browser-based interactive applications using Phaser 3 with optimized rendering performance
- Integrated third-party APIs and built secure endpoints for client and admin management tools
- Backend development using Node.js and Laravel with comprehensive test coverage

IT Associate **Mar 2020 – Aug 2022**

EMD Technologies Philippines Inc.

- Developed and maintained web and internal software solutions across multiple technology stacks
- Diagnosed, troubleshot, and resolved system and application issues, reducing downtime
- Managed system setup, deployment, and maintenance for internal and client-facing platforms
- Collaborated with cross-functional teams to ensure system stability and user satisfaction

KEY PROJECTS

CoreBridge — *Full-Stack Developer*

- Built a game aggregator platform consolidating multiple providers into a unified API system with standardized integration layers, session handling, and wallet/transaction flows

MemoraOrbs — *Full-Stack Developer*

- Designed an NFC-based digital memory platform integrating physical hardware with a web media system; led architecture, deployment, and cross-device media delivery

WeFund.live — *Developer*

- Built key features for a crowdfunding platform including campaign browsing, contribution flows, and API integrations supporting secure transactions

Remitify — *Full-Stack Developer*

- Developed a remittance system with secure transaction processing, balance management, and admin reporting interfaces

EKYC Verification System — *Full-Stack Developer*

- Built an identity verification system integrating Amazon Rekognition for facial recognition, document validation, and automated onboarding workflows

Clinic Appointment System — *Full-Stack Developer & Deployment Lead*

- Developed a clinic scheduling platform with Node.js/TypeScript backend and React.js frontend, deployed on BytePlus cloud with CI/CD pipelines

SKILLS

Backend: Node.js (Fastify, Express), PHP (Laravel)

Frontend: React.js, Vue.js, AngularJS, Phaser 3, PixiJS

Languages: JavaScript, TypeScript, PHP

APIs: REST, GraphQL, WebSocket, Third-Party Integration

Databases: MySQL, PostgreSQL, MSSQL, MongoDB

Cloud & DevOps: AWS (S3, RDS), Docker, Git CI/CD

Practices: Agile (Jira), TDD, MVC, Performance Optimization

Specialized: Game Dev, Real-Time Systems, Payment Gateways, eKYC

EDUCATION

Bachelor of Science in Information Technology **2013 – 2017**

Don Bosco College – Canlubang
